PROFILE

With a background combining IT, industry, and Supply Chain, I have worked in both small and international organizations. I have built and led teams, designed complex architectures, and developed innovative solutions. From industrial optimization to enterprise architecture and PLM creation, these diverse contexts have strengthened my adaptability. I have designed over ten decision-support tools and led a network of 10 architects managing 200 business applications.

My goal: to bring my vision to a human-sized company focused on the design of high-value industrial solutions.

EXPERIENCE

FOUNDER OF HEPHAISTOX

2021 – 2025

Co-founded Hephaistox – a decision-support offering for SMEs (digital twin of a workshop to simulate new workloads, new organization, raw material or tooling constraints, etc.)

PRODUCT OWNER PLM – MICHELIN

2019 – 2021

Product Owner of a product management and BOM solution tailored to Michelin's unique quality processes.

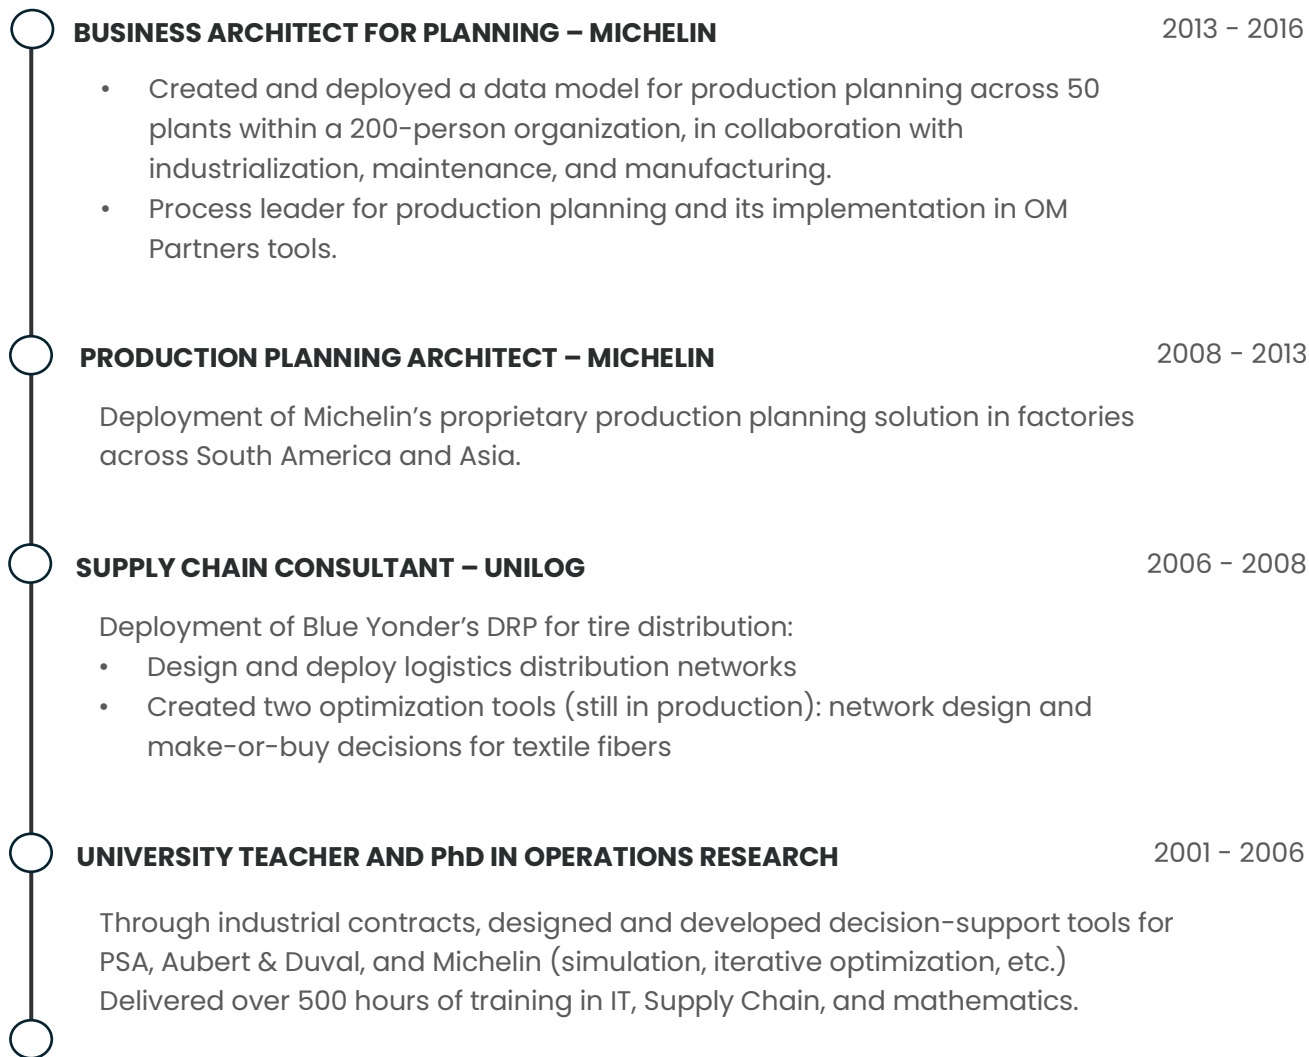

Within the Supply Chain organization, with strong ties to logistics, costing, quality, and manufacturing, I defined the product vision, built a multidisciplinary team, and motivated pilot plants.

ENTERPRISE ARCHITECT – MICHELIN

2016 – 2019

Enterprise Architecture (EA) for Supply Chain (200+ applications, leading a network of about 10 architects). The position included strategic studies for executives on ERPs and production and distribution planning tools.
